Hi there, here is the updated patent application for your review and feedback. The purpose of this is to describe to "an unimaginative technician skilled in the art" how to implement your system. That is why I have referenced certain source functions so there is sufficient guidance to get the pieces needed to put the system together.

I have tried to reconcile different terminology between for example fig 7, 8 and the paper on the scale and have included items when in doubt so as not to overlook them. An error is more readily seen than an omission.

Can you review and then we can discuss and finalise. I am about tomorrow except for an early pm meeting.

Regards
